

# Well Analyzer

*Pro-Active*

*Automated Real-Time Surveillance (ARTS)*

*Well/Reservoir Evaluation Software Package*

***Blind Reservoir Mapping***

***Oilfield Data Services, Inc.***

# ODSI Well Analyzer

Digital Operator Support Real-Time Automated System  
Real-Time Reporting on Well/Field KPI's

## The Well Analyzer RTS Concept:

**Experienced Surveillance Engineers**  
+  
**Automation**

### VFM/PVT

Virtual Metering

Auto Real-Time  
PVT Tuning &  
Calibration

### Flow Assurance

Wax, Hydrates,  
Asphaltenes, Scale,  
Corrosion,  
Emulsion Detection  
& Mitigation

### Production & Reservoir Performance Optimization

Auto Real-Time PTA &  
Reporting

Scale, Asphaltene  
detection in reservoir &  
wellbore

In-place and recoverable  
hydrocarbon volume  
monitoring

In-place and recoverable  
hydrocarbon volume  
monitoring

### Field Development & NPV Optimization

Short- and long-term  
asset and NPV  
Optimization

Drilling Decisions –  
Optimal Well Placement

### Asset Modeling, Monitoring & Diagnostics

Raw sensor data

Data  
Communication

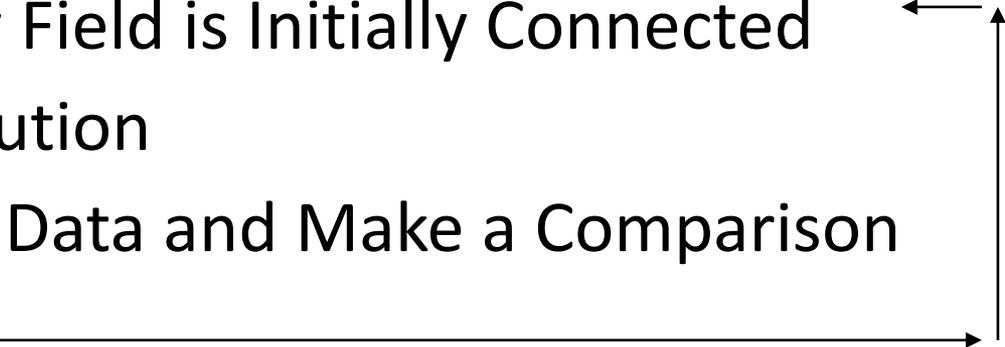

Intermediate Data  
Repository

Real-Time Data  
Management

## State of the Art – What We Do Now

- Set Capillary Entry Pressure to Zero
  - Derive Diffusion Equation
  - Guess a Fixed Reservoir Boundary
  - Assume Flow Field is Initially Connected
  - Compute Solution
  - Smooth Real Data and Make a Comparison
  - Guess Again
- 

# A Bit of Controversy:

ISN'T LOOKING AT THE MAP FIRST...Just...

## CHEATING?

Does Blind Mapping Increase the Validity of the Model?

## What if....

Instead of performing mathematical manipulation with the data and pre-setting the boundaries, we:

- Apply Thermodynamic Constraints (1<sup>st</sup> & 2<sup>nd</sup> Law)
- Include the Higher Order Terms in the Diffusivity Eqn.
- Include the Concept of Threshold Pressure (pressure drop required to initiate flow from a pore)
- Treat the System Like a Mass Transfer/Energy Dissipation Process

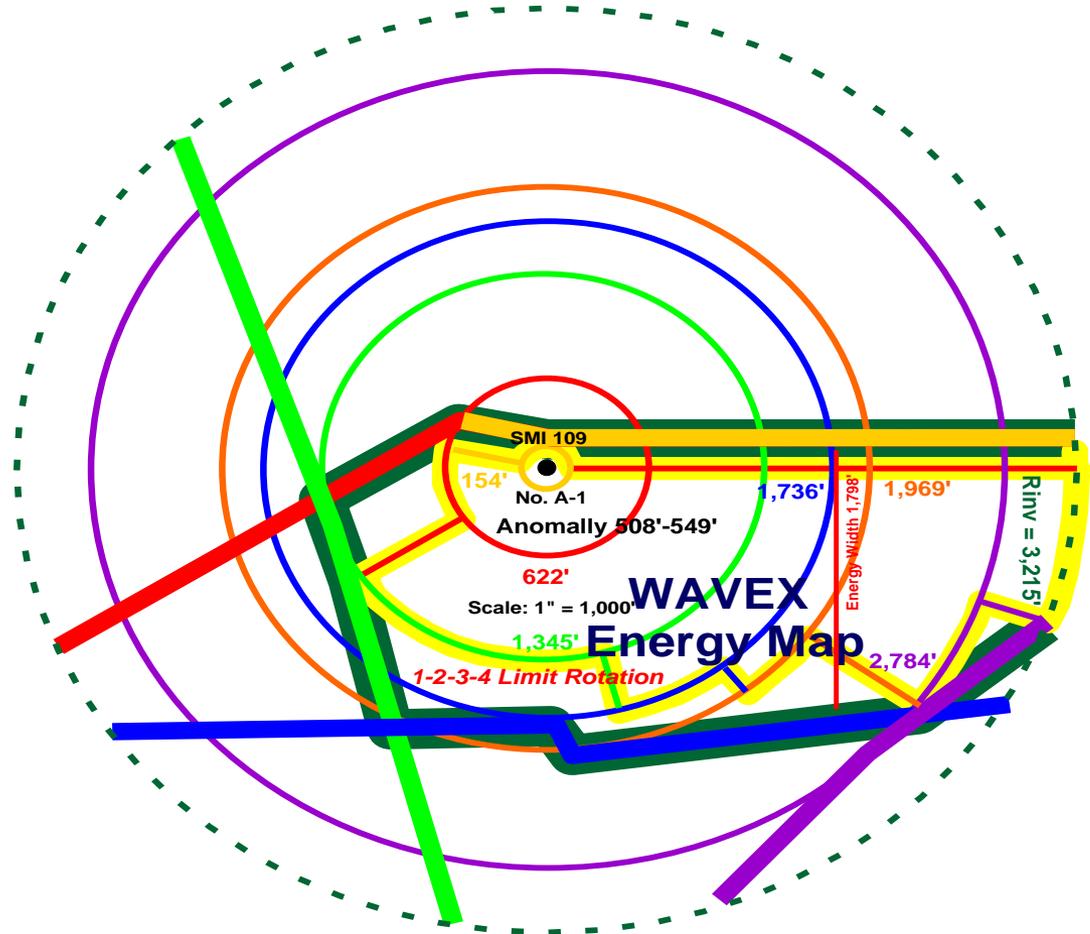

# R&D Session: Blind Energy Map

- A Closed Solution
- Running Volumetrics – don't have to reach PSS to get a volume
- More Accurate Permeability-Thickness
- More Accurate Distances to Limits
- Differentiate between Faults, Strat-outs & Gas-Liquid Contacts
- Relative Position of Limits to Each Other
- A Map You can show the G&G guys without getting laughed out of the room

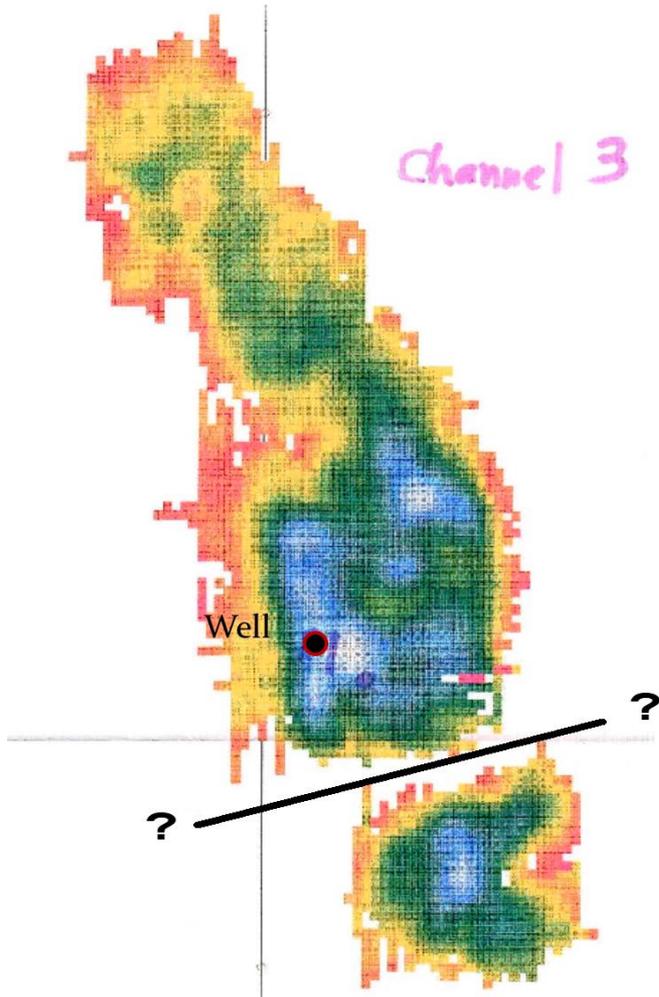

# Blind Energy Map – Example From Pressure/Rate Data ONLY

...Now, let's meet  
with the G&G  
team

This is the point to  
begin integration  
of Well Testing &  
Seismic.

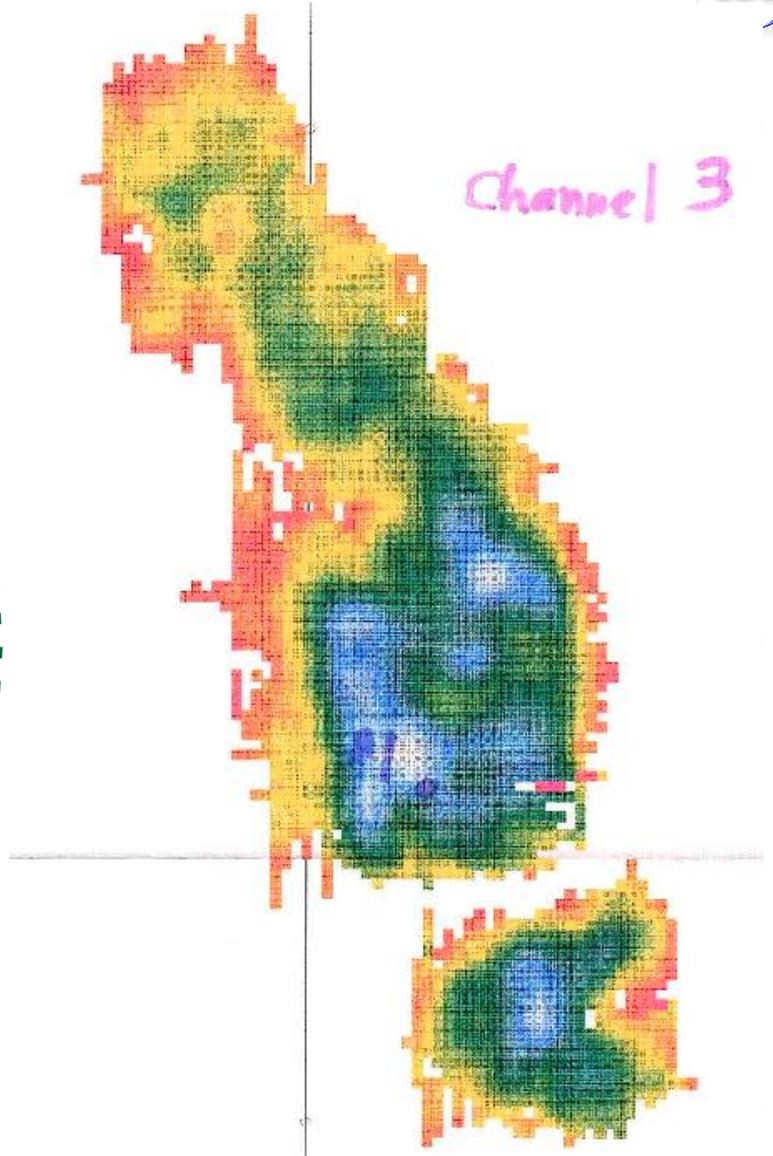

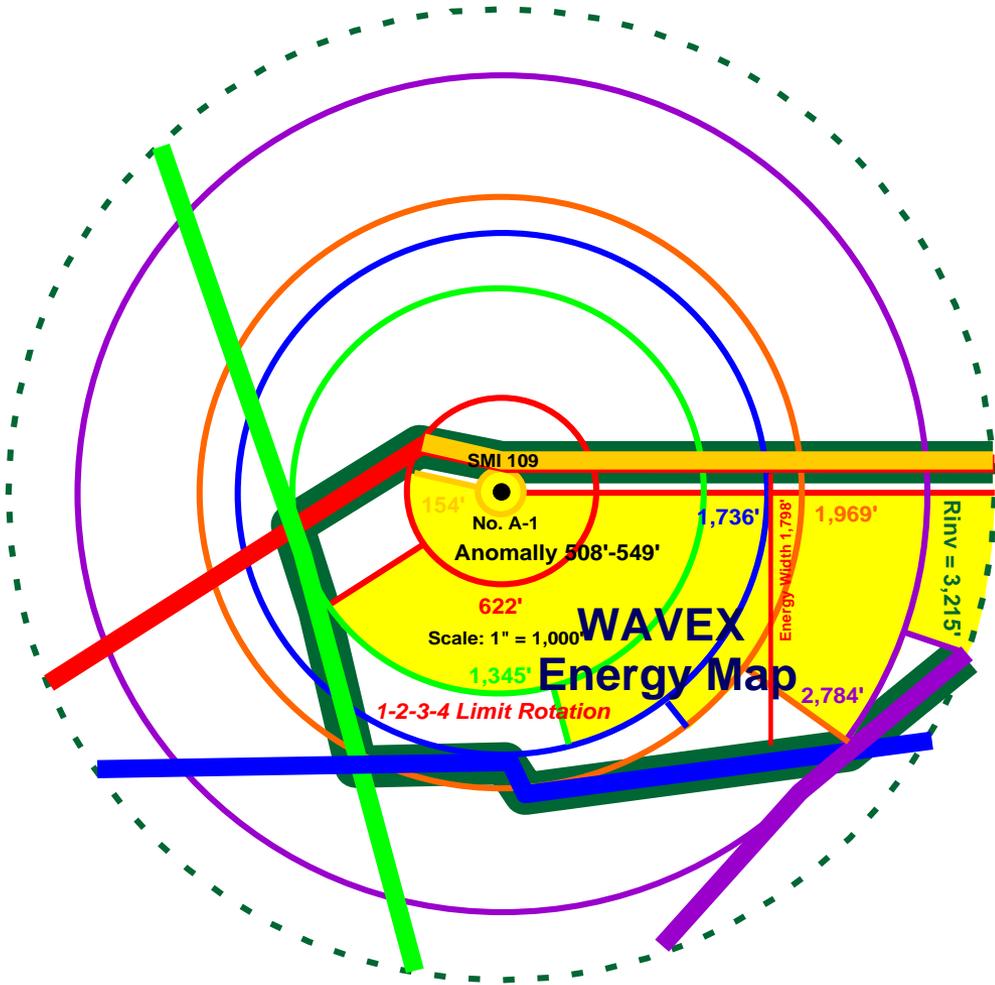

# Blind Energy Map – Example From Pressure/Rate Data ONLY

## Is This One or Two Reservoir Compartments ?

# Blind Energy Map – Example From Pressure/Rate Data ONLY

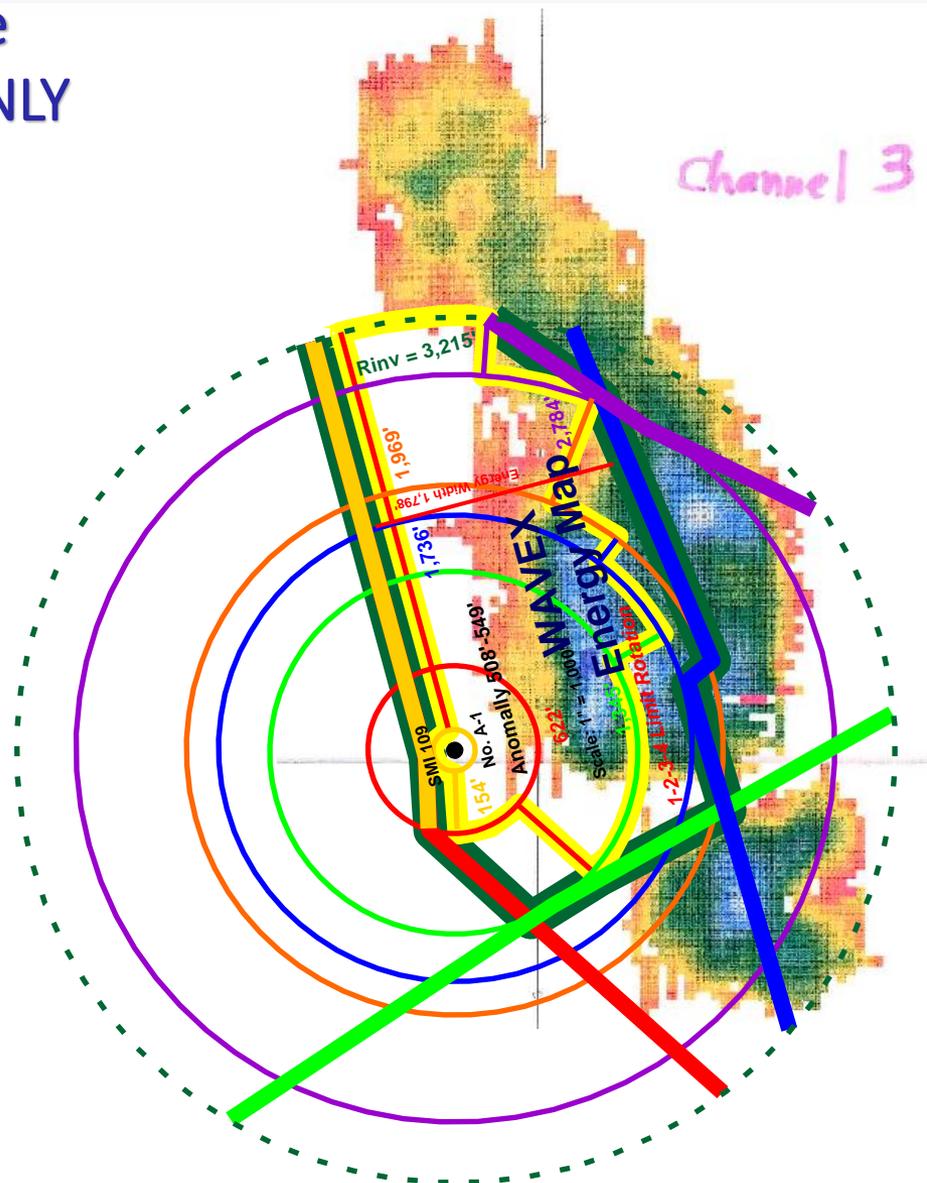

- ✓ Oil & Gas Reservoir Testing and Evaluation
- ✓ Real-Time Pressure Transient Analysis
- ✓ Hydrocarbon Volume Determination
- ✓ Well(s) Performance Tracking
- ✓ Multiphase Rate & BHP Calculations
- ✓ Optimize Gas Lift / Oil Production Rates
- ✓ Life Of Well Surveillance/Analysis
- ✓ Automated PVT Calibration

# Blind Energy Map – Example From Pressure/Rate Data ONLY

## Conclusion:

- The reservoir compartments are NOT connected
- The study improved operator's geological interpretation
- ODSI evaluated 18 BFC of gas in place; the well produced 12.7 BCF (depletion drive; high compressibility rock)
- Once the 'Top' compartment was depleted, the operator side-tracked to the 'Bottom' compartment and encountered virgin pressures

# Blind Energy Map – Example

## From Pressure/Rate Data ONLY

### Questions?

- How Long to Generate Results? 2-5 days
- How Much? <\$35,000 plus data acquisition costs
- Besides the Pressure & Rate Data, What do You Need?
  - Logs
  - Core/SWC data
  - Fluid Properties
  - Completion/Wellbore Diagram
  - NOT Your Map
